

# What the Herp?

[About](#)[Learn](#)[Map](#)[Social](#)[Help](#)[Submit](#)

Create Non-Sensitive Record

Creates a posting that shows both the exact location and photo of the specimen. Best for users with little knowledge or populations in healthy standing.

Create Sensitive Record

Creates a posting that restricts specific information from being seen while noting the class of the specimen and the relative location. Release of specific information is subject to approval by poster. Best for threatened species/ areas.

Create Closed Record

Creates a posting that is essentially private. The relative location can be pinned to the map, but no details will be disclosed. Information will be uploaded to the database but will not be visible to anyone outside of authorized facilities. Best for protecting sensitive locations and endangered species.

## What is Herpetology?

Herpetology is the branch of zoology concerned with the study of amphibians (including frogs, toads, salamanders, newts and the gymnophiona) and reptiles (including snakes, lizards, amphisbaenids, turtles, terrapins, tortoises, crocodilians and the tuataras). The discipline can include the biology, ecology, behaviour, taxonomy and husbandry of these organisms.

## Why are snakes so creepy?

Telling people why they are considered creepy by so many people...

## Recent Publications

- List
- of
- recent
